Downloads – CSL

On this page, you'll find non-flyable, CSL aircraft models for use when flying in online *Air Traffic Control [ATC]* Networks. Having them installed enables *Walker Air* aircraft to be visible to others while flying there.

✈ **CSL**

Below, you'll find non-flyable, CSL aircraft models for use with online ATC networks. These packages enable you to see our Pilots in Walker Air Transport livery when you're flying together online. We've added as many models as possible that are available and match our fleet.

We've also reviewed and linked ICAO IDs that may be similar – for example, we used a single 767 model for both the -200 and -300 variants. If required, make sure you download the appropriate package for the network you're using.

We will work to add more aircraft models as they become available.

At this time, we're still investigating and/or developing CSLs for MSFS and Prepar3D/FSX. If/when aircraft are developed and available for release, look for an update in the NOTAM channel in our Discord.

Last Update: 05/22/2021

Aircraft Available:

```
Airbus A320
Airbus A321
Airbus A330-300
Beechcraft Baron G58
Beechcraft Bonanza G36
Beechcraft King Air 350
Beechcraft Model 99
Boeing 747-8
```

Which Network:

⬇ All v1.0

Ruleset courtesy of WAT392 David W.

Development Halted

Due to the closure of the FLAi Project, it is uncertain if/when we will have CSL's.

FLAi

Last Update: 09/18/2021

Aircraft Available:

```
Airbus A300
Airbus A300F
Airbus A300ST
Airbus A310
Airbus A319
Airbus A320
Airbus A321
Airbus A330
```

Which Network:

⬇ PilotEdge v1.6

⬇ VATSIM v1.7
