

Getting Started

I'm signed up and want to take my first flight. Now what?

The steps you need to take to prepare yourself for your first flight are detailed in our **New Pilot Orientation** document. It may be found **here**.

Review it carefully. Afterwards, if you have any questions, complete and submit a **Help Ticket**.

Can I start flying immediately?

Yes; however, we *very strongly recommend* reading our *New Pilot Orientation* document **before** doing so. It may be found **here**.

Once you've finished that, you're all set. Bid your flight, fly it – *and* have fun!

I'm flying in an Event... Can I start a flight as soon as the Bid Window opens 3 hours before the event -- or -- do I have to wait until the scheduled Start/Pushback time?

Yes, you may begin your flight as soon as the Bid Window opens.

How do I find flights to fly?

The process of finding a flight is covered in great detail in our *New Pilot Orientation* document. It may be found **here**.

Where can I get weather reports for my flights?

There are a number of sources you may use to obtain weather reports for your flight. Flight simulators typically allow weather to be generated realistically using internal weather generation methods. In addition to a number of free, online resources, there are also a number of payware addons that can be used to receive up-to-the-minute weather information.

Do I have to fly using real weather?

While using actual weather conditions can enhance your overall flight experience, you do **not** have to use it. Configure it any way you like.

What if I can't find a suitable Cargo or Scheduled flight to fly?

You *always* have the option to create, bid and fly a **Charter** flight. You may also purchase a Jumpseat and explore flight options at another airport.

Learn more about Jumpseats **here**.

Can I start my flight early?

Yes. Actually, you may start your flight at any convenient time so there won't be clashes or conflicts with what you have going on in your real-world life. This is, after all, a virtual environment, not a real one – and, more than anything else, it's about having fun.

Flight times shown in *Crew Ops* are displayed in UTC. This is simulator time, **not** real-world time. If a flight is scheduled to depart at 1600 UTC, we encourage you to fly it at that time to enhance the overall experience; however, that's **not** mandated.

I completed a bid on a flight, but it looks like I'm not going to be able to fly it. Now what do I do?

You don't have to do anything. It will remain in your *Completed Bids* page for 48 hours. If you don't complete the flight *before* that time period expires, it will be automatically deleted – or you may go to *My Bids* and manually delete it.

*Tour bids do **not** expire.*

Will my bid expire if I don't complete the flight?

It will be saved in your *Completed Bids* page for 48 hours. After that, it'll be automatically deleted. If you wish to bid the same flight at a later date, you'll need to re-enter it.

*Tour bids do **not** expire.*

How long before a scheduled flight's departure time can I bid on it?

You can create and submit a bid on any **Cargo** and/or **Scheduled** flight at any time. Once the bid has been submitted, you can fly it *immediately*, irrespective of the published departure time.

Do I have to use real airport charts and maps when flying for Walker Air Transport?

No – although a number of our Pilots choose to enhance their experience with us by doing so and find it useful and rewarding. It's completely up to you. Their use, however, can certainly add an element of realism to your flying experience.

When flying online with *IVAO*, *PilotEdge* and *VATSIM*, though, you'll probably need them when you arrive or depart under the ATC guidance they provide.

By the way – many of these items can be downloaded from the Internet at no cost.

How can I obtain airport charts?

Airport Charts suitable for simulation purposes are typically available within your flight simulator. There are also many other options – free *and* subscription-based – that can be explored using the Internet.

When I use Google to find something on the Internet, I can never seem to find what I'm looking for. Can you help me?

It's well beyond the scope of what we do here to provide lessons on how to conduct a search using *Google* – or any other Internet Search Engine. We *can*, however, suggest a tutorial many others

here and elsewhere have found helpful. You may find it **here**.

Does Walker Air Transport use ACARS (flight tracking software) Programs?

Yes. We currently utilize TFDi Design's *smartCARS 3* program and *FlightTrackerXP*, an ACARS-compatible flight tracker for MacOS (**X-Plane only**). They seamlessly interface with our custom-designed and automated *Flight Data System* by pulling flight data directly into our database, enabling us to create PIREPs and populate the *Crew Ops* website with data. That allows you to concentrate on flying, **not** manually completing and filing reports.

What's a PIREP?

A PIREP is, quite simply, a *Pilot Report*. It contains digital data about the flight you flew and completed. After processing that data in our automated, proprietary system, it's immediately filed, at which time it's also added to your *Pilot Logbook* and is available for review.

Manual PIREPS are not allowed.

When will my PIREP be posted to my Flight Log?

Instantly. We use a custom-designed, automated PIREP system that, with the simple click of a couple of buttons, files it before you ever leave your aircraft at the end of a flight.

Manual PIREPS are not allowed.

How do I file a PIREP?

You don't ever need nor will you ever be able to manually file a PIREP – our automated, proprietary system does that for you.

Click a couple of buttons once your aircraft has come to a stop and it's done.

Manual PIREPS are not allowed.

Do you accept manual PIREPS?

No. Manually-completed PIREPS are **not** allowed.

When will my PIREP be approved?

Technically, **all** PIREPS are **automatically processed** and approved once they’re submitted.

Manually-completed PIREPS are not allowed.

Depending on a number of factors, though, a PIREP will be classified in one (1) of the following ways:

Approved	Rejected	Diverted
----------	----------	----------

The criteria used to make that decision is as follows.

Approved	Rejected	Diverted
<p>The criteria for an Approved flight are:</p> <ul style="list-style-type: none">You completed a flight from your planned <i>departure</i> airport to your planned <i>arrival</i> airport; and,The Company’s <i>Landing Rate Standard – a landing rate equal to or softer than -800fpm</i> was achieved. <p>All points, flight hours and pay are awarded.</p> <p>The PIREP is posted to your Logbook as being Completed Approved.</p>	<p>The criteria for a Rejected flight are:</p> <ul style="list-style-type: none">The Company’s <i>Landing Rate Standard – a landing rate equal to or softer than -800fpm</i> was exceeded; and/or,Your flight time was 00.00 hours (premature landing); and/or,You used more fuel than you left the airport with (in-flight refueling); and/or,You did not fly with a <i>Walker Air Transport</i> livery. <p>No points, flight hours or pay are awarded.</p> <p>The PIREP is posted to the your Logbook as being Completed Rejected.</p>	<p>The criteria for a Diverted flight are:</p> <ul style="list-style-type: none">You completed a flight from your planned <i>departure</i> airport to an <i>unplanned arrival</i> airport; and,The Company’s <i>Landing Rate Standard – a landing rate equal to or softer than -800fpm</i> was achieved. <p>All points, flight hours and pay are awarded.</p> <div><p><i>If this occurs when flying a Tour leg, you will not be advanced to the next leg. The leg will have to be reflight.</i></p></div> <p>The PIREP is posted to your Logbook as being Completed Diverted.</p>

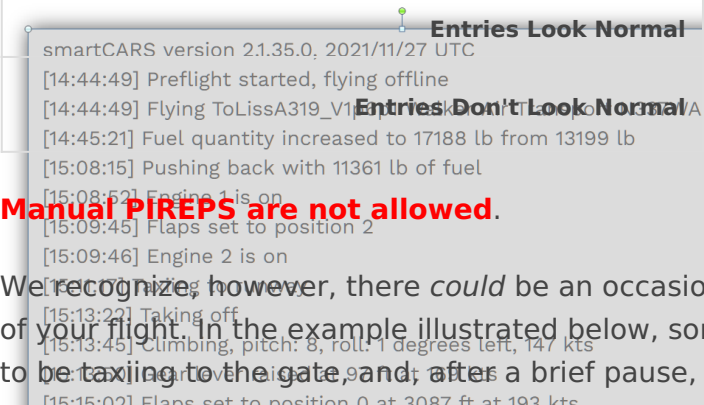

What if I disagree with what the PIREP says about my flight? Is there a Formal Review process?

Data generated by your flight simulator about your flight is transferred, via ACARS, to our automated *Flight Data System* for processing. It's that data transfer that enables us to create the PIREP you see and what's posted in your **Logbook**.

The control inputs you make in your flight simulator while flying are the only manual elements of the data recording and transmission process – everything else is data driven.

Once you arrive at your final destination, land and taxi to a stop. Before doing anything else, take a moment to review your ACARS log to ensure its entries look normal.

Here's an example of a typical ACARS Flight Log whose entries appear to be Normal. Each entry represents a data point the Sim transmitted to our *Flight Data System*, and its that data we used to generate the PIREP.

 <p>smartCARS version 2.1.35.0, 2021/11/27 UTC [14:44:49] Preflight started, flying offline [14:44:49] Flying ToLissA319_V1 [14:45:21] Fuel quantity increased to 17188 lb from 13199 lb [15:08:15] Pushing back with 11361 lb of fuel [15:08:52] Engine 1 is on [15:09:45] Flaps set to position 2 [15:09:46] Engine 2 is on [15:13:22] Taking off [15:13:45] Climbing, pitch: 8, roll: 1 degrees left, 147 kts [15:14:57] Taxiing to the gate, 90 ft, 193 kts [15:15:02] Flaps set to position 0 at 3087 ft at 193 kts</p>	<p>Submit the PIREP.</p> <p>Click Cancel. Doing so will not affect your Logbook in any way – it'll be like the flight never occurred.</p>
---	---

Manual PIREPS are not allowed.

We recognize, however, there *could* be an occasion where something doesn't look right at the end of your flight. In the example illustrated below, something was *obviously* amiss – it's not possible to be taxiing to the gate, and after a brief pause, becoming airborne again...

While exceedingly rare, these kinds of anomalies *can* occasionally occur. We certainly sympathize with you if something like this happens. However, no Formal Review process exists because we do **not** have any control over the operation of your computer, your flight simulator, the stability of your Internet connection and/or any other operational factors affecting how data is collected and transmitted to us. As a result, we must trust the data your flight simulator generates and transmits to us via ACARS to be an accurate representation of what occurred during your flight. After that transmission occurs, we do **not** have the ability to change or alter any flight data nor will we ever do so.

Something doesn't look right to me on the PIREP for the flight I just completed. What do I do?

We certainly sympathize with you if something like this occurs. However, we do **not** have any control over the operation of your computer, your flight simulator, the stability of your Internet connection and/or any other operational factors affecting how data is collected and transmitted to us. As a result, we must trust the data your flight simulator generates and transmits to our *Flight Data System*.

via ACARS to be an accurate representation of what occurred during your flight. After that transmission occurs, though, we do **not** have the ability to change or alter any flight data nor will we ever do so.

What to do?

Simply stated, you'll need to re-fly that flight.

Revision #40
